

VIMANA to Discuss its Blockchain Airspace Network at GBLS Summit

June 5, 2018 – Redwood City, CA – VIMANA Global, whose turnkey solutions fuse aerospace design with blockchain technology, will participate in the 2018 Global Sleepless Blockchain Leadership Summit.

The GBLS conference and expo will be held June 6 in the Hangzhou Yunqi Town International Convention and Exhibition Center. GBLS is the world's first blockchain industry product and equipment exhibition. It will bring together industry-leading innovators from academia, industry, government, and venture capital companies.

VIMANA CEO Evgeni Borisov will speak at the summit, presenting VIMANA's plans to reduce urban traffic congestion using its VIMANA Blockchain Airspace Network and its Vertical Take-Off and Landing (VTOL) Autonomous Aerial Vehicles (AAVs).

“The summit is a great opportunity for us to share our vision of modern urban transportation,” said Borisov. “We are especially excited to discuss our plans and blockchain solution in this region of the world where many Smart City initiatives are already underway.”

Participants at the summit will get to view a mockup of VIMANA vertical take-off and landing AAVs. The AAVs are designed to use urban airspace to transport commuters, move cargo throughout a city, and allow first responders a way to get to a location quickly. VIMANA is developing single- and four-seat AAVs that have fore and aft tilting wings, each with four electric propellers powered by electric or hybrid-electric motors.
